LUIZ FILLIPE

SOFTWARE ENGINEER

ABOUT ME

I am a Software Engineering student at Centro Universitário Una Contagem, currently in my third semester, focusing on web development.
I work as a freelancer, having developed responsive web applications, including a complete web app for a barbershop using React, Node.js, and TypeScript.
My core values are discipline, clear communication, and natural leadership.
I am constantly seeking to improve my technical skills and expand my knowledge of modern technologies within the JavaScript ecosystem.
My goal is to secure an internship or freelance opportunity that allows me to grow professionally and contribute to projects with real impact.

WORK EXPERIENCE

Full-stack Developer

BARBEARIA BOZO'S BARBEIROS

Remote
October 2025

Developed a full-stack queue management system using NestJS and Next.js with PostgreSQL database. Created real-time virtual queues allowing customers to join via mobile interface while barbers manage appointments through dedicated admin panels.
Key features include automated WhatsApp notifications, live queue tracking, multi-barber support, and performance analytics. Implemented JWT authentication and cloud deployment on Vercel and Railway.
The solution eliminated physical queues, improved customer experience with proactive notifications, and optimized barber shop operations through efficient digital management.

Frontend Developer

VIVO

Remote
July 2025

As a Frontend Developer, I modernized the customer service page using React.js and TypeScript. Implemented responsive contact forms, live chat integration, and FAQ section. Optimized page performance through code splitting and lazy loading techniques, while ensuring accessibility compliance and consistent design across all devices.

Full-stack Developer

JUNIOR GÁS

Remote
October 2025

Full development of a mobile-first one-page e-commerce using Next.js (App Router) and TypeScript, styled with TailwindCSS and enhanced with smooth scrolling and animations. Integrated with Supabase (PostgreSQL, Auth, and APIs) for product and order management, including a checkout flow with payment gateway integration and WhatsApp redirection. The project also features a secure admin panel for order tracking and printing, with a focus on performance, clean architecture, and conversion optimization.
